

Citing the classic cases of enterprise programming, this book, taking project-oriented as principle, fully shows the process of NC programming. It consists of ten projects. For each project, it integrates the relevant software knowledge with operation skill through product model analysis, formulation of processing routes, NC programming operations and project exercises. What needs to be stressed is that this book pays more attention to analyze the problem occurring in the true product and practice of production, and the combination of theory with practice. Whats more, it highlights the effect of plan, thinking, feedback and analysis in study, which is beneficial to developing students capability.
