

Did you know that a simple stomach bacterium called H. pylori may trigger heart disease? Heart disease is the number one killer disease and has been linked to basic risk factors such as high cholesterol and blood pressure, diabetes and obesity. But the truth is that it is actually caused by much simpler risk factors that you can easily avoid. One important risk factor is a little known stomach bacterium called H. pylori, which is carried by around 50% of the world's population. H. pylori has been scientifically shown to influence more than half the known heart disease risk factors listed by the medical system, yet nobody is talking about it. In this groundbreaking book, functional medicine practitioner and author David Hompes presents irrefutable evidence that H. pylori is an independent risk factor for the world's number one killer condition and shatters long-held myths about what really causes heart disease. But it doesn't stop there. H. Pylori: From Heartburn To Heart Disease is a riveting discussion that challenges medical and public consensus. Dozens of studies are presented, showing how heart disease is actually caused by a cocktail of stress, chronic infections, toxins, inflammation and low nutrient levels – especially vitamin C. By considering these risk factors, Hompes then reveals how you can stay heart healthy for life and combat heart disease before the first heart attack. Based on the very latest studies and clinical findings, he presents a simple, drug-free plan for preventing, managing and reversing heart disease and staying healthy for life.

Core Competencies in Cognitive-Behavioral Therapy: Becoming a Highly Effective and Competent Cognitive-Behavioral Therapist (Core Competencies in Psychotherapy Series), Desire and Reason; Being an Account of the Origin and Development of Intellectual Principles, Petrographic Mineralogy, 1955, 408 pages with illustrations., From AA to AD, A Wistful Travelogue, Herbert Heider, Administrator Etc. v.
