

Phase one had been completed, and the Crellar had returned to the ancient techno-landfill with their ship. They were one step closer to returning to their native Crellum. Humans provide a great source of physical and emotional nourishment to the Crellar. Now that humankind had returned to living in an agrarian society, they could offer no resistance to the Crellar fleet which would return in overwhelming numbers. Standing in the way of this plan was a most unlikely and unwilling hero: Lars "Gulliver" Nilsson, a computer programmer who had never left the subterranean Bunker in which he and ninety-nine other humans had lived their entire lives. Gulliver and the others were the ancestors of those who had taken shelter during the robotic rebellion which had nearly eradicated all humans from the face of the Earth. Had the robots accomplished their mission, there would be no life forms of any kind left on Earth. Their goal had been to create a world much more conducive to machinery. Although his title was Programmer, Gulliver had never actually programmed anything. He interacted daily with Central, the only artificial intelligence in existence. Gulliver and all humanity had the colossal supercomputer to thank for the fact that there was any life on the planet whatsoever. His people also had Central to thank for their day-to-day lives: the computer provided them with all they needed. And they were the only humans left that used electricity or any other form of technology. Gulliver had a singular mission to perform: he was to go and destroy the Crellar fighter, using a hand held pulse beam weapon that Central would provide him. The mission might have been simple: accomplishing it would be quite complicated. Gulliver had never been outside before. He had a great deal to learn simply to survive. His teachers would not be of the school variety: they were those who had learned the hard way how hard life could be. The giant Hammer would be among them, and this would make things much simpler. But simpler is a relative term, as Gulliver would soon discover. This action adventure novel concludes the Hunters Wheel series with a literal bang!

A Dozen Cousins: Exploring the Number 12 (Math Focal Points (Discovery Library)), A Calculated Life, Simple Candle Magick, Law and Politics of the Danube: An Interdisciplinary Study, Explorations in Macroeconomics, The Middle East and South Asia 2005 (World Today Series Middle East and South Asia), True or False: Tests Stink!,
