

Covering every major photonic device, this textbook strikes a careful balance between theoretical and practical concepts. The devices it covers include optical fibers, couplers, electro-optic devices, magneto-optic devices, lasers, and photodetectors. The book is well-suited as a text for senior undergraduate and graduate courses, as well as a device-driven engineering reference for professionals.

2. Lecture plan. 1. Introduction to optical waveguides. 2. Passive optoelectronics devices. 3. Active photonics devices - detectors and sources. 4. Optical amplifiers. The expectation is that photonic devices will partially replace existing semiconductor devices, but on top of that will also complement these in a qualitative way. At Photonic Devices Group, Faisal, a PhD candidate with Prof. Morichetti and Prof. Melloni, has developed Silicon Oxycarbide (SiOC), a promising material.
